

CCE 313 - Computer Networks: Assignment & Presentation Guideline

Department of Computer Science and Engineering
Bachelor of Science, 5th Semester

1.0 Introduction

This document outlines the formal requirements and evaluation criteria for the course project presentation in **CCE 313 - Computer Networks**. The objective is to deepen your understanding of core networking concepts by applying them to a practical scenario, enhancing your research, technical, and presentation skills.

2.0 Presentation Format & Technical Requirements

To ensure a professional and consistent standard, please adhere strictly to the following:

- **Language:** The presentation must be delivered in **English**.
- **Duration:** The presentation must be a minimum of **10 minutes**. It is recommended to not exceed 15 minutes to allow for Q&A.
- **Format:**
 - You are required to create a **"PowerPoint Video"**.
 - This video must be a recording of your PowerPoint slideshow **with your face visible via webcam** throughout the presentation (e.g., using the "Record Slide Show" feature in PowerPoint with camera on).
 - The video should include your **voice narration** for all slides.
- **File Submission:**
 - **File Name:** Your submission file must be named using your **Student ID** followed by your **Name**.
Format: [StudentID]_[FirstName]_[LastName].mp4
Example: 202315001_Md_Ahmed.mp4
 - **File Type:** The final submission must be in a common video format (e.g., **.mp4** or **.mov**).

3.0 Presentation Structure (Recommended Outline)

Your 10-minute presentation should be well-structured. Follow this outline to ensure clarity and completeness:

Slide 1: Title Slide (Approx. 30 seconds)

- Course Code and Name (CCE 313 - Computer Networks)
- Presentation Title/Topic
- Your Name & Student ID
- Semester ([B.Sc.](#) CSE, 5th Semester)
- Date

Slide 2: Introduction & Problem Statement (Approx. 1.5 minutes)

- Briefly introduce the topic.
- Clearly state the problem or concept you are addressing.
- Why is this topic important in the field of computer networking?

Slides 3-5: Core Technical Content & Methodology (Approx. 5-6 minutes)

- This is the main body of your presentation.
- Explain the key concepts, protocols, or architectures in detail.
 - Use diagrams, flowcharts, and packet structures from your textbook (e.g., Forouzan/Kurose) or RFCs.
 - If your assignment involves analysis (e.g., Wireshark) or a design (e.g., network topology), explain your approach and methodology here.
- Break down complex ideas into digestible parts.

Slide 6: Analysis, Results, or Practical Implications (Approx. 2 minutes)

- What did you find or conclude?
- If applicable, show screenshots of your analysis (e.g., Wireshark captures, simulation results from Cisco Packet Tracer/GNS3).
- Discuss the real-world implications of your topic.

Slide 7: Conclusion & Summary (Approx. 1 minute)

- Summarize the key points you have made.
- Reiterate the main takeaway.

Slide 8: Q&A / References (End of Video)

- You can include a final slide that says "Thank You & Questions?".
- List key references (e.g., "Forouzan, B. A. (2012). *Data Communications and Networking*," or specific RFCs and reputable websites).

4.0 Content & Topic Selection Guidelines

Choose a topic that demonstrates your understanding of the course curriculum. Suggested areas include:

- **In-depth Protocol Analysis:** Deep dive into TCP congestion control, QUIC protocol, BGP routing, or OSPF.
- **Network Design:** Design a network for a small office/college, explaining IP subnetting, VLANs, and device selection.
- **Security Focus:** Explain the operation of Firewalls, VPNs (IPsec/SSL), or an intrusion Detection System (IDS).

- **Performance Analysis:** Use Wireshark to analyze TCP behavior, DNS queries, or HTTP/HTTPS traffic and present your findings.
- **Emerging Technologies:** Explain Software-Defined Networking (SDN), Network Function Virtualization (NFV), or the impact of 5G on network architecture.

Note: Your topic must be approved by your course instructor.

5.0 Delivery & Presentation Skills

Since this is a video, your delivery is crucial for engagement.

- **Voice & Narration:**
 - Speak clearly, confidently, and at a moderate pace.
 - Avoid reading directly from the slides. Elaborate on the bullet points.
- **Professional Demeanor:**
 - Dress appropriately as you would for an in-person presentation.
 - Maintain eye contact by looking at the camera lens.
 - Ensure your background is neat and professional.
- **Slide Design:**
 - Use a clean, consistent, and professional template.
 - Avoid cluttered slides. Use bullet points, not paragraphs.
 - High-contrast color schemes (e.g., white text on dark blue) are best for readability.
 - Use high-quality images and diagrams. **Cite the source of any non-original images.**

6.0 Evaluation Criteria

Your presentation will be graded out of 100 marks based on the following rubric:

Criteria	Weight	Description
Technical Accuracy & Depth	30%	Correctness and depth of networking concepts explained.
Clarity & Structure	25%	Logical flow, organization, and clarity of the presentation.
Visual Aids & Slide Quality	20%	Professionalism, readability, and effectiveness of PowerPoint slides.
Delivery & Communication	15%	Voice clarity, pace, use of English, and professional demeanor.
Adherence to Guidelines	10%	Meeting time (10 min min.), file naming, video format, and face-cam requirement.
Total	100%	

7.0 Submission Deadline & Procedure

- The final video file must be submitted by **[Insert Deadline Date and Time]**.

- Submit via the designated platform on the university's Learning Management System (e.g., Moodle, Canvas).
- **Late submissions will be penalized as per course policy.**
